

# Replacing Radius Doors

- Since most radius doors vary only slightly, you can successfully use a replacement door that is not exactly the same as the original
- When measuring for the replacement, be sure to measure the height and width of the rough hole as if it had SQUARE corners.
- Do NOT measure the door from corner to corner!
- To save time and make sure you get a good color match, we recommend ordering your replacement doors with painted frames.
- If the frame of your new door does not completely cover the putty marks from the old door, use lacquer thinner to clean off the marks. Be careful not to rub too hard or you may damage the painted or fiberglass finish.

***All custom product is non-stock and non-refundable***
